

TERRACYTE[®]

Broad Spectrum Algaecide/Fungicide

NEED TO KNOW

Moss and algae infestations can stop grass from growing and destroy a beautiful lawn. Protect lawns and outdoor areas with TerraCyte Moss & Algae Control.

- Will Not Harm Grass and Prevents Re-Establishment of Moss
- Works on Contact
- Uses No Heavy Metals
- Approved for use in Environmentally-Sensitive Areas
- Patented and Registered with the US EPA
- Can be used around People, Animals, Pets, Birds and other Wildlife

WHAT IS TERRACYTE?

TerraCyte Moss & Algae Control is a granular, dry peroxide product that kills moss, fungi, and algae quickly. TerraCyte can be broadcasted over an entire lawn to guarantee a moss-free yard or used as a spot treatment for areas that are more susceptible to moss and algae.

WHERE CAN TERRACYTE BE USED?

Use TerraCyte anywhere you find moss or algae in your yard. TerraCyte is perfect for maintaining a beautiful, lush lawn, mulch, or planting beds.

HOW DO I APPLY TERRACYTE?

Applying TerraCyte only takes a few simple steps. Thoroughly water the area that has moss. Apply the TerraCyte granules evenly over watered area and water again to activate the TerraCyte. Within 24 hours, the moss will be dead and brown. Simply rake up the brown, dead moss; add new topsoil; and re-seed. Repeat each spring and fall to keep moss from invading your lawn.

HOW DOES TERRACYTE WORK?

TerraCyte granules react with the cell structure of moss, algae, and fungi and begin working immediately. TerraCyte eradicates moss and algae within 24-48 hours of the initial application. For best results, apply in the morning and in full sun as the heat from the sunlight helps increase TerraCyte's efficacy on moss.

HOW MUCH TERRACYTE SHOULD I USE?

When applying TerraCyte, make sure that areas are completely and evenly covered. Use two to four pounds per 1000 square feet for regular moss control applications. To stop a heavy infestation, apply TerraCyte at four to eight pounds per 1,000 square feet. Each 13-pound container of TerraCyte will cover 6,500 square feet. TerraCyte is also available in 50-pound containers for larger applications.

CAN TERRACYTE BE USED AROUND FAMILY AREAS AND PETS?

TerraCyte has a unique formula that is an alternative to heavy metals and toxic chemistries. TerraCyte's environmentally responsible formula has been registered with the EPA. TerraCyte may be used without worrying about your family and pets.

WHAT MAKES TERRACYTE DIFFERENT FROM OTHER PRODUCTS?

TerraCyte is unique in that you can reseed right away. Other moss control products leave behind a toxicity that does not allow new seed to germinate. TerraCyte does not leave behind any residue, giving you the ability to eliminate moss and reseed all in one weekend. To help new seed take hold, mix together topsoil, seed, and starter fertilizer; use this mixture to fill in bare spots left from removing dead moss.
