Preliminary Laboratory Results Indicate SaniDate® All Purpose Disinfectant is an Effective Virucide Against Human Coronavirus, Pending EPA Review and Approval

EAST HARTFORD, CT – BioSafe Systems is pleased to announce preliminary results from a GLP efficacy study demonstrated that SaniDate All Purpose Disinfectant is an effective virucide against *Human Coronavirus* on hard, non-porous surfaces. SaniDate All Purpose Disinfectant met the performance requirements under the test conditions for virucidal efficacy as set by EPA. The efficacy study was conducted using the product at a rate of 3.0 fl. oz. per gallon with a 10-minute contact time. SaniDate All Purpose Disinfectant demonstrated total inactivation of the virus, a $\geq 4.00 \log_{10}$ reduction in titer of *Human Coronavirus*. US EPA requires a minimum $\geq 3.00 \log_{10}$ reduction in titer for approval.

With these positive results, the virucidal study will be submitted to United States EPA for evaluation and approval with a label amendment to add virucidal *Human Coronavirus* claims through an expedited process. Once approved, this virus will be added to the product label in the United States* allowing the product to be included in the *EPA List N-Disinfectants for Use Against SARS-CoV-2*.

SaniDate All Purpose Disinfectant (U.S. EPA Reg. No. 70299-27) is a hydrogen peroxide and peroxyacetic acid-based one-step disinfectant cleaner for hard, non-porous surfaces. This product is formulated as a bleach alternative for use within medical facilities, childcare, schools, and at home. SaniDate All Purpose Disinfectant controls mold, mildew, and bacteria (*Pseudomonas aeruginosa*, *Staphylococcus aureus*, and *Salmonella enterica*) on contact.

*Registration is pending in Canada. Product review is currently underway with Health Canada and once approved, SaniDate All Purpose Disinfectant will be added to Health Canada *Disinfectants for Use Against SARS-CoV-2 (COVID-19) List*.
